EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with W. Douglas Hahn on December 19, 2006. The application has been amended as follows:

Claim 25 has been cancelled.

The following is an examiner's statement of reasons for allowance:

Claims 14-24 are allowed.

Consider **claims 14, 23, and 24** the best prior art of record found during the examination of the present application, **Noreen et al (US Patent Application Publication #2002/0183059 A1)** in view of **Higuchi (US Patent Application Publication #2002/0045445 A1)**, fails to specifically disclose, teach, or suggest a state determining section operable to monitor a reception state of the broadcast program received by said receiver, and operable to determine whether the reception state of the broadcast program is a deteriorated reception state and a reproducing section operable to reproduce the broadcast program received by said receiving section until the reception state of the broadcast program has become the deteriorated reception state, and, upon a determination by said state determining that the reception state of the broadcast

Art Unit: 2618

program has become the deteriorated reception state, said reproducing section is operable to switch from reproduction of the broadcast program received by said receiving section to reproduction of the program data received by said communication section.

Noreen et al disclose a broadcast radio receiver for receiving the radio broadcast (paragraphs 16 and 46); a GPS unit operable to determine whether the mobile unit receives GPS coordinates from the GPS unit in response from commands by the subscriber for transmission to the network operations center (paragraphs 46 and 48); a interactive radio network operable to generate advertisements or musical selections specifying the radio broadcast received by the broadcast radio receiver; a wireless transmitter for transmitting the advertisements or musical selections to the network operations center and receive the program segments corresponding to the radio broadcast specified by the advertisements or musical selections from the network operations center (abstract, paragraphs 4, 12, 46, and 48); and a reproducing section operable to change the carrier frequency on the interactive radio mobile unit received by the wireless transmitter, upon determination by the GPS unit that the mobile unit has received GPS coordinates from the GPS unit in response from commands by the subscriber for transmission to the network operations center (abstract, paragraphs 46, 48, and 74).

Higuchi discloses a portable mobile unit that informs the user of the deterioration of the speech quality after a predetermined time. The user can immediately know that a signal sent out from the portable mobile unit has not reached the other party. These teachings clearly differ from the claimed invention, therefore, claims 14-24 of the present application are considered novel and nonobvious over the prior art, and, consequently, are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bobbak Safaipour whose telephone number is (571) 270-1092. The examiner can normally be reached on Monday - Friday, 8:00 a.m. - 5:00 p.m., EST.
